SEGA CD UPDATE! I am very interested in purchasing the Sega CD as soon as it comes out this fall. I believe that CD games are the wave of the future and Sega seems to heve the most up-to-date geme system and CD technology Even though I have researched my purchase, there still seem to be a few unknowns in the way the Sega CD will be packaged. I get all the game magazines and nobody seems to know exactly what us game players will get for our \$299 One megazine which used to have reliable info is saving Sol-Feace won't be released in the U.S. while Sens says that it will be one of the discs included with the system! The mag also says that Renovation will do Cobra Command but Sega again says that they will bring out the disc. Sega should know what they are doing but can you give us the final story on the mysterious Sege CD Vincent Tucker

(Ed. Always willing to help Vince. The reason why you are getting difterent stories is because Sega is constantly changing their minds. The CD system is very important to them and they want to give the players the best deal possible when the system

comes out this holiday season.
With the system configuration literally changing every month, you have to be careful which magazine you get the information from. Not to bash our competition, but EGM has the shortest learn-time in the biz?

Is this the first configuration? Does Sonic the Hedgirting have a

There have been other game changes happening on the Sege systems. Color Command CD, previously known as Trunderstorm FX, is now being prought out by Sega themselves, not Renovation. The US. rights to the not call Trunderstorm for the area days gone to Sega, and the services of the color for the

#### **BOGUS SF2 ARCADE GAMES**

I recently took a trip to Talwan, I know most of the Japanese imports go immediately over there, and of course. SE2 was the hottest arcade around. One thing that was unusual though was that the SF2 machines are different. My friends living there said that these 'different' versions were flegal ripoffs. While they look and play very much like SF2 they could do new moves. Not only that but you could perform moves in the air! The fireballs could be thrown ac slow that you could walk inside your own firehall Sonic hooms could be thrown in mid air. There were many more new and interesting twists to

When I went down to the pizze parior to play SF2 CE, I discovered there were new mid-air moves! The game was fun but can EGM tell me if this was a rio-off gamed?

WONDERMEGA BLUES...

Now with the Sens CD only a month away I am cetting very excit ed about this spectacular peripheral. While \$299 is a bit on the high side. the free clacs do make it a good value for the money.

That was until I saw your last issue and off in the corner on one your EGM Express pages is a picture of something called the Wondermega. Just exactly what is this? Should I consider buying this new product, or will iteven come out in the U.S.? Michael Robles

If you are really into the audio, however, then you will want to et leest take e look at this system. JVC has added a few coo. features that will turn your crank. ## thinking of bringing their system out PLAY STATION DEAD?

(ater this yeer.)

I am an avid Super NES and Sony fen, end the Play Station looked to be a dream come true. That was guite a while ago and other than bits end pieces of new info, there hasn't been anything new about Sony's dream machine. Have they soothed their problems with Nintendo? Will the Super NES CD-ROM and the Play Station still be competible?

Codar Mulligar Port Alexander, AK

(Ed. We haven't heard anything new about the Play Station for a few months. It's important to note that Sony has slaned up with Seas to be a CD-ROM software licensee. This being the case, the best guess is that they were never able to reach an egreement with Mintendo and probably decided to hold off on bringing out their own system since they didn't have the software support.)

#### S-NES CD-ROM 32-BIT & \$200?

You guys have already printed the species and names of some of the games for the Sega CD. You even told about the pack-in discs and release schedule, but what you haven't talked abouts lot is Nintendo's Super NES CD-ROM. Cen you give us an update? Will is come out in January 1993? Is Nintendo still plenning to sell if or \$200?

#### Jose Galvez N. Hollywood, CA

Please check out the story that Nifrendo is changing their Super NES CD-ROM plans. I got a letter from them or September 14th and they said that their new peripheral is to be 32-Bit and still cost only \$2001 They even go on to talk about a new 5-D graphes chip that they are working on. If this is true, their machine should leave Segal's overprised 18-Bit CD-ROM in the dual!

## SUPER-FX CHIP BRINGS 3-D TO SUPER NES

During the prestigious Shoshinakai Software Show (basically a Nintendo-only trade show) in Tokyo, Nintendo of Japan president Hiroshi Yamauchi confirmed reports that Electronic Gaming Monthly had been making for several months. On August 26, 1992, the top dog of Nintendo unveiled plans to use a new chip set, called Super FX, in future 16-Bit Super NES game cartridges

The proprietary chip used by the FX extender is based on RISC technology and includes a digital signal processor. The chip has been designed to perform bigh level mathematical functions enabling the Super NES to now display textured mapping, shading and real-time three-dimenstional effects. The quality of the new visuals is reportedly so good, according to Nintendo, that

they daim their 16-Bitter will be able to out performanything currently on the market.

The first set of softs to utilize the new Super FX chip will be released by Nintendo in February, 1993, No. title was given, but it is known that third-party licensees won't get their hands on the technology until early next year

The Super FX chip is not the first DSP upgrade available for the Super NES. Game ticensee and developer Seta has introduced a new extender that enhances the speed of the console to nearly BMHzi The first game. that will take advantage of the innovation in a big way will be F1-ROC 2 which should find its way onto store. shelves sometime in the middle of next year.

The Sets-designed Digital Signal Processor chip speeds up the SNES!

The Nintendo chin will allow the Super NES to really take on Atari's Jaguar system, which is also based on RISC technology (although insiders who have seen both hint that the Atari hardware still surpasses Nintendo's software upgrade). The first real casualty of the Super FX chip was instead Nintendo's own CD-ROM drive (see related story)

### SUPER NES 32-BIT CD COMING NEXT YEAR

Coinciding with the announcement during the Shoshinakai Software Show in Tokyo, Nintendo announced that they are shelving plans to have a CD-ROM drive on the market any time soon.

Instead of competing directly with Segs. Nintendo now hopes to battle out the next generation of gaming on their own terms, sometime in lete 1993

To gain the overwhelming advances that Nintendo feels CD ROM needs for success, they are continuing with the development of such an accessory but will instead

base it on a new, custom 32-Bit processor Nintendo of Japan president Hiroshi Yamauchi indicated that a

32-Bit Super NES CD-ROM peripheral could be in production by August of 1993. Further plans will be announced at the '93 SCES.

## **GENESIS AND NES GET MODEM GAMING**

One of the first peripherals originally unveiled for the Sega 16-Bitter was the Tele-Genesis modern. This "revolutionary" device was touted as the next generation of video games at a time when NFC was countering the Genesis with their own CD-ROM add-on for the TurboGrafx-16. Ultimately, the Turbo upgrade failed to meet with widespread acceptance and the Sega modern, once it became evident that the threat from NEC was hollow, never saw the light of day in the states.

That fact hasn't deterred a new unstart from seeking to plot its own arowth in the telephone camino market

The Teleplay Interactive System, being released in the Spring of 1993. by Baton Technologies, promises to deliver on the promises Sega made over three years ago! Their unit goes beyond the wizardry of the original Sega device, however, to also Include NES games, a faster baud rate and a number of name releases that take advantage of the unit.

Although a Sega modern network was started in Japan, it never gained acceptance.

While info on the new network was sketchy at press time, the basic elements of the add-on have been revealed to FGM

The modern operates as a standalone attachment that connects to the Genesis via the expansion port. A separate lead going out of the

Teleplay System then runs to an operating telephone lack. You dia another Baton modern owner, follow the on-screen prompts, and play

While the company has privately indicated that they intend to have a Nintendo version of the evetem available soon, and that cross-platform play (with Genesis and NES

owners competing at the same time) may be possible, no working details were divulged. Although such a feat may be possible, it would seem likely that the quality of the games would mirror the technological restrictions of the NES, rather than the options afforded by the Genesis,

If head-to-head play were possible The system runs at 2400 baud another indicating factor that the quality of modern play may be limited for the same reasons that eventually sent the Tele-Genesis to its grave. The first game, Terran Wars, is far from complex, but still remains a competitive two-player title. Supposedly the device will also make additional upgrades, such as computer keyboards, accessible to Genesis modern users. In any event,

Q: How is it possible that CD players can run video games?

#### Jamie Passey Bellingham, WA

A: CDs in the garring world can be used in several ways. We tradbonally think of them as possessing great audio and often supplying actual human speech for pointed text, but when it comes to high frame-rate arcade-style games, CDs can lave problems.

Playing video games, however, is something COs can do as easi as cartridges, floppy discs or any other memory stom as medium The CD-ROM systems generally dump off the code into a buffer which can then our the game with out any search and display problems A CD, after all, can hold un to 550 megabytes, so memory space and great sound are its strong points. FOUR'S COMPANY... Several companies are setting out to juice up the Super Famicom in Japan with cool peripherals designed to offer new options. From Hudson we saw a new four-player adaptor that allows the whole gang to play. Besides the four ports opened up by the device (due to appear n November), another player can still use the open slot on the control deck. Although it wasn't on display, you can bet that a four-player Bomberman isn't far hehind. Konami showed off a new controller that uses a satel-He dish to nick up infra-red from their new multi-task pad Although Konami has no firm plans to pop into the U.S. controller market, the idea should surface from another company.
